

## **Melting powder III**

Artikel No.: 3140400203

### **Smooth melting precious metals residues or waste!**

**When smooth melting, precious metal-bearing residues or waste, without previous driving off impurities, are fused together.**

**Smooth melting is applied even when bare remnants of precious metal alloys are melted, to establish this semi-component or bars. Here, it is particularly important that the metal remains are really clean and free of debris**

**Usual amount to melting: approx. 20-30% of the weight of the metal on enamel powder admit III.**
